

CALIBRATION KIT (CO/CO₂)

MODEL CO/CO₂CALKIT

GENERAL DESCRIPTION:

The **CO/CO₂CALKIT** is the calibration kit designed specifically for use with Toxalert's Gvu-2R carbon monoxide sensors and CO220 or AIR2000 carbon dioxide sensors, both used in conjunction with the Gvu series ventilation control systems. The kit contains two tanks of span gas, which contain the proper concentrations of carbon monoxide and carbon dioxide needed for proper calibration. The required hardware and fittings are included to provide correct gas volume and metering. The kit also contains complete instructions and an industrial grade carrying case. The kit has enough gas for approximately 40 calibrations for each type of sensor. Calibration is recommended on a quarterly basis.

FEATURES:

- **Two Tanks of Standard Span Gas (17 Liter)**
- **Regulator/Pressure Gauge**
- **Sensor Calibration Cover With Tubing**
- **On/Off Valve**
- **Gas Humidification Jar**
- **Adjustment Screwdriver**
- **Carrying Case**
- **Complete Set-Up and Calibration Instructions**

(Please refer to applicable data sheets or instruction manuals for calibration procedures)

ORDERING INFORMATION:

If a calibration kit is needed for a Toxalert Gvu system with both Gvu-2R and CO220 or AIR2000 sensors, contact your local Toxalert representative or contact Toxalert directly for information on ordering CO/CO₂CALKIT. Please verify the system model and serial number if ordering for a unit already in operation.
